## Education

Ghulam Ishaq Khan Institute of Science and Technology (GIKI)  
BS in Cyber Security

September 2024 – June 2028

## Summary

Cyber Security undergraduate at GIKI with hands-on experience in secure web development, vulnerability assessment, and security hardening. Proficient in C++, Python, and SQL, with practical exposure to ISO 27001, NIST CSF, and CIS benchmarks through real-world projects involving threat modeling, RBAC implementation, CSRF protection, and risk register development.

## Projects

### Secure Login System

2025

- Engineered a C++ RBAC system featuring **real-time** email **OTP verification** and **OOP** based secure session management.
- Secured sensitive credentials using XOR file encryption and **cryptographic hashing** to ensure high-performance data integrity.

### Footy Trivia – [visit the site](#)

2026

- Secured a full-stack web application using **FastAPI** & JS with **JWT** authentication, **CSRF** protection, rate limiting, **CORS** hardening, **XSS** escaping, and **CSP** headers, while identifying and documenting residual vulnerabilities such as unsafe inline **CSP** and missing **SRI hashes** for future remediation.
- Built and deployed a full-stack football trivia platform with secure authentication, **RBAC**, and **automated** email workflows to eliminate manual re-engagement tasks and sustain an active user base.

### Web Application Security Testing with Burp Suite

2026

- Performed web application security assessments focused on **privilege escalation**, **IDOR**, and authorization vulnerabilities.
- Utilized **Burp Suite** to analyze and exploit authorization flaws through request manipulation and session testing.

### OptiSpace: A Smart Campus Facility Booking & Utilization System

2026

- Implemented **JWT** authentication, **bcrypt** password hashing, and **RBAC** across 4 user roles, enforcing parameterized queries in PostgreSQL to prevent **SQL injection**.
- Designed a PostgreSQL database with **ACID** compliant transactions, automated **triggers**, and real-time conflict detection for a campus facility booking system.

### NorthStar Security Framework

2026

- Implemented and validated 18 security controls on a Flask web application following **ISO 27001** and **NIST CSF 2.0**, producing remediation documentation and hardening reports.
- Built a secure Flask app with **RBAC**, **bcrypt**, **CSRF**, and **TLS**; conducted **STRIDE** threat modeling and developed a 28-risk register aligned with **CIS benchmarks**.

## Skills

**Languages:** C++, Python, SQL, Node.js (Basic).

**Web & Database:** PostgreSQL, Vercel, Supabase, Figma, FastAPI

**Tools & Technologies:** Git & GitHub, Burp Suite, Linux (Basic), Shodan, Web Scraping (Python, BeautifulSoup).

**Cybersecurity:** Web Application Security, Vulnerability Assessment, Access Control Testing, Network Security, Threat Detection & Analysis

## Volunteering Experience

Organized and managed large-scale academic and extracurricular events including MUNs, Career Fairs and Industrial Open Houses. Led teams and coordinated stakeholders for campus and school events, including a school cricket tournament, ensuring smooth operations, scheduling, and participant engagement.

Managed logistics and execution for science fairs, symposiums, and campus initiatives.
